

Underarm Ski Pole System for Giant Trinity

To angle the poles and arm rests on your Giant trinity using our components you have two options:

1. **Use D2Z pole clamp and angled shim.** This gives the most streamlined look and is the easiest installation. The D2Z pole clamp has bolt spacing of 32mm so your arm rests would need to accommodate this spacing (our arm rests are compatible).

[D2Z Angled Shim Set - now available in 10, 12.5, 15, 17.5 and 20 degrees - Drag2Zero](#)

2. **Use D2Z angled shim with interface plate** (uses the Giant pole clamp). This will look less streamlined and is trickier to install but is the slightly cheaper option. Bolt spacing for arm rests is 20-40mm with this set up. <https://drag2zero.co.uk/wp-content/uploads/2020/05/D2Z-Interface-Plate-Installation.pdf>

With both installations you will need to use the first two front and rear Giant proprietary spacers on the basebar to provide the flat mounting surface onto which our angled shim/interface plate is mounted. Some of these spacers contain small pins – these will also need to be removed (this can be done with pliers).

To obtain any height you can use our risers or the Giant spacers, however using the latter will mean there will be a mismatch in alignment. [D2Z Spacers - Drag2Zero](#)

If you are not using the Giant cross brace between the podiums, **and** you are also using our spacers to add height, you will also need to use our 5mm riser to sit between the Giant risers and our risers/angled shim (see attached photo) as this provides much more stability to the set up. The Giant has M5 bolts so please select M5 nuts when ordering the angled shims. If you want to angle the arm rests alone, please see our under arm rest angled shims here [Angled shims - Under Arm Rests - Drag2Zero](#)

If you need any further information, please let us know.
